ELMODIS Sp. z o. o. is the supplier of the monitoring and diagnostics system for selected machines at SAINT-GOBAIN Innovative Materials Sp. z o.o., ul. Szklanych Domów 2 in Dąbrowa Górnicza, Poland. The application covers fans and pumps used in the technological process, units of key-importance from the production point of view.

Implementation of this system enhanced visual management of the diagnosed machines. The solution proposed by the Company provides continuous access to diagnostic data, periodic reports and developing initial algorithms that predict anomalies in machines.

The installed system has already helped us in early diagnosis of machine anomalies, which prevented stopping production. Visualized data on machine operation facilitate making decisions based on the current condition of machines. We are now in the course of analyzing the received predictive reports, which we hope will help us to early detect anomalies.

The cooperation with ELMODIS Sp. z o. o. during both the implementation and installation of the system was in accordance with the prepared schedule and technical conditions.
